

## CSP60 Texture Sand (Specialty Product)

### What is Texture Sand?

A very fine sand that can be added to a non-moving glaze such as CSP03 Matt Medium for texture build up of design work.

It is not recommended to mix more than 1 part of Textured Sand with 2 parts of non-moving glaze.

Not recommended for food surfaces. For decorative use only.

### Coloring:

It will take on the color of the non-moving glaze you add it to. In the CFE color system you can tint CSP03 Matt Medium and other light colored glazes and then add Texture sand for colored dimensional build up.

### Application:

Can be applied by brush or sponged on when added to a non-moving glaze. It is not recommended to force dry.

When design build-up is dry you can shade on top of texture with Color Concentrates or Professional Studio Pigments.

Petals of flower shown here to the right are built up and then shaded.
